Dedicated Private Cloud (DPC)

Choose GlobalNet Private Cloud Infrastructure
when control, performance and security are your
top priority

- Private cloud is a cloud computing environment dedicated to a single customer.
- It combines many of the benefits of cloud computing with the security and control of on-premises IT infrastructure.
- DPC is physically isolated, single-tenant collection of compute, network and sometimes storage resources exclusively provisioned to just one organization or application.

FEATURES

- We design, build and operate dedicated private clouds to meet specific enterprise needs.
- One shared operating system.
- Converged infrastructure.
- Network virtualization platforms from VMware.
- Provide managed services for IaaS and applications, including technical support, backups, and monitoring of service performance.
- Each partition running its own operating system with its own dedicated resources.

FUNCTIONS

- Private Hosting Server
- Multi Storage
- Single Tenant
- Resource dedicated
- Advanced Security from Third Party Partner Integration

BENEFITS

- High Availability
- Greater Visibility Security
- Multi-server configurations for maximum uptime & performance
- High Performance
- Redundant servers and data replication to keep critical databases online
